Invention:

This invention is a project manual for individuals learning how to skateboard or those interested in skateboarding history. Graduated levels of mastery for learning how to skateboard (from the basics to more advanced moves) are provided.

Background:

While there are many classes and lessons that are used to teach individuals how to skateboard, this invention provides an alternative for individuals who do not have access to these lessons or classes. Additionally, other means of learning how to skateboard fail to combine the history of skateboarding, the evolution of skateboarding, and the emphasis on safety into their lessons.

Applications:

- Teaches a variety of youth groups how to skateboard in a safe manner

Advantages:

- Emphasis on safety information
- Four competency levels (versatile for skateboarders of differing skill levels)
- Contains the history and evolution of skateboarding
